EnrollEase:

Development of a FamilyVillage Resources Elementary School Website with an Integrated Enrollment System.

Our thesis title is structured around three main components: the purpose, the goal, and the main focus of the project. The term **"EnrollEase"** reflects our purpose and objective—to provide future enrollees with an ease, smooth, hassle-free enrollment experience. This aligns with our goal of developing an official website for Family Village Resources Elementary School that serves both informational and functional roles.

The main focus of the project is the integration of an online enrollment system into the school website, allowing parents and guardians to register students conveniently from their devices. Beyond streamlining the enrollment process, the website also aims to enhance the school's online presence by offering essential features such as school information, announcements, events, contact details, and more.
